We controll the only proven potash deposit in the State of Nevada that has not as yet been taken over by operating companies!

Estate consists of 16 sections of lake bed, all acquired by original location.

Surface soil from 1 foot to 18 feet in depth above salt bed.

Assays run from a minimum of 1 41/100 % to 3% above mentioned.

Now have drilling operations in progress to prove up the deposit underneath the salt beds.

See April Sunset Magazine for an exact parallel description of property.

More complete data and sack samples will be sent to interested parties who would contemplate a visit to the property.

This proposition is open to individual buyers, agents, brokers or manufacturers.

Will require big money.

Time is the essence.

And,

Should be investigated before drill penetrates area underlying salt and proven to contain higher potash values.
